

Introducing the Reist TrailPro

The easier, faster way to groom municipal trails

One machine. One operator. One pass.

TRAILPRO

**REIST
INDUSTRIES**

Innovation Working For You

Groom your trails faster with one machine, one operator, one pass

Reist TrailPro: The 3-in-1 heavy-duty implement for municipal trail maintenance

The Reist TrailPro is a unique trail grooming implement that trims edges, reclaims gravel and levels your trails in one pass.

Features

- **Unique edging disc** (one on each side) removes grass and weeds from side of trail. Cuts down to the root ball. Disc reclaims gravel and stone dust that has built up along edge of trail, and re-distributes it across the trail, eliminating need for costly re-gravelling. Disc creates a clean, trimmed edge.
- **Angled blades** remove high spots and level the trail.
- **Spinning rotor** pulverizes and separates root balls and stone dust. Carbide-tipped teeth spin at 540 RPM, leaving no stone unturned.
- **Levelling plate** compacts the product, leaving a smooth trail that can be used immediately by the public. Made from ¾-inch steel.

TrailPro trims edges, reclaims gravel and levels your trails in one pass

Two edging discs reclaim gravel and leave a trimmed edge

Five angled blades level the trail and re-distribute gravel

Pulverizing rotor separates root balls and stone dust

Levelling plate creates smooth, level surface

Specifications (TP72, shown)
