

We sell, engineer
and repair pumps
during **normal**
business hours.

Which is to say,
24 hours a day.
365 days a year.

Up here in northern Ontario, when your pump stops, you stop.

Whether you run a mine, a chemical processing plant or a pulp and paper mill, you need to operate 24 hours a day, 7 days a week, 365 days a year. And so do your pumps. You can't afford system downtime.

You face another challenge.

When you buy a pump and operate it for 20 years, the purchase price represents only 5% of your total cost of ownership. The other 95% is for installation, operation and maintenance. To reduce these costs, you must buy the right pump for your application and operating environment. And that's not easy. Pump technology is changing all the time.

Dynapro keeps you up and running, around the clock.

At Dynapro, we do three things that keep your business competitive. We maintain pumps. We engineer pumps. And we sell pumps. That's it. We're pump experts. Have been for a decade.

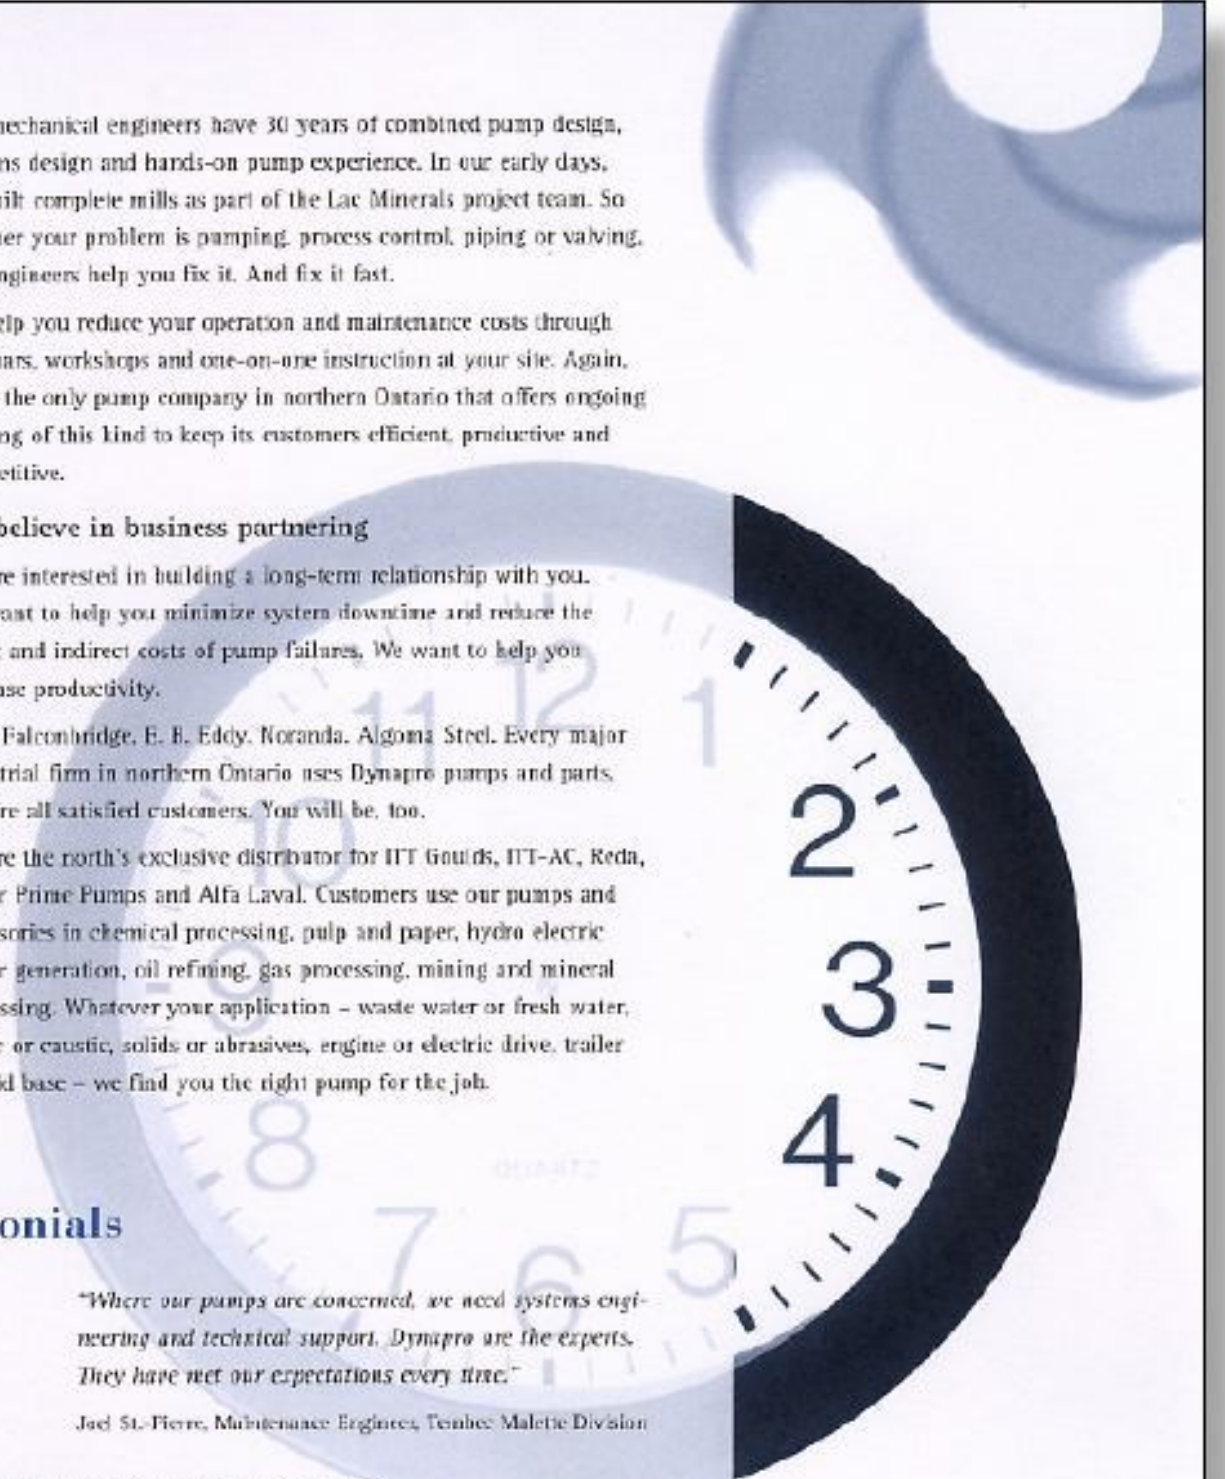

Dynapro is the only pump company in northern Ontario that stocks pump parts

We carry your pump parts inventory for you, saving you hundreds of thousands of dollars in warehousing costs. Our central parts warehouse in Sudbury uses Electronic Data Information (EDI) and Electronic Funds Transfer (EFT) systems. Through parts agreements and advanced pump selection software, we respond quickly to your requests.

Dynapro is also the only pump company in northern Ontario that delivers pump parts within 24 hours. You don't have to wait days or weeks for parts to arrive from some distributor in the south. Just call Dynapro, and we'll deliver your parts today. We use these same parts along with decades of expertise to repair and rebuild your existing pumps. We like to reduce your capital expenditures whenever possible. At our repair facility in Sudbury, our factory-trained mechanics refurbish your pumps to the original manufacturer's specifications.

We do more than sell you a pump

Dynapro is the only pump company in northern Ontario that offers systems engineering, consulting and technical support as well as pumps and pump parts.

Our mechanical engineers have 30 years of combined pump design, systems design and hands-on pump experience. In our early days, we built complete mills as part of the Lac Minerals project team. So whether your problem is pumping, process control, piping or valving, our engineers help you fix it. And fix it fast.

We help you reduce your operation and maintenance costs through seminars, workshops and one-on-one instruction at your site. Again, we're the only pump company in northern Ontario that offers ongoing training of this kind to keep its customers efficient, productive and competitive.

We believe in business partnering

We are interested in building a long-term relationship with you. We want to help you minimize system downtime and reduce the direct and indirect costs of pump failures. We want to help you increase productivity.

Inco, Falconbridge, E. B. Eddy, Noranda, Algoma Steel. Every major industrial firm in northern Ontario uses Dynapro pumps and parts. They're all satisfied customers. You will be, too.

We are the north's exclusive distributor for IIT Grinders, IIT-AC, Reda, Power Prime Pumps and Alfa Laval. Customers use our pumps and accessories in chemical processing, pulp and paper, hydro electric power generation, oil refining, gas processing, mining and mineral processing. Whatever your application - waste water or fresh water, acidic or caustic, solids or abrasives, engine or electric drive, trailer or skid base - we find you the right pump for the job.

Testimonials

"Where our pumps are concerned, we need systems engineering and technical support. Dynapro are the experts. They have met our expectations every time."

Joel St-Pierre, Maintenance Engineer, Tembec Malette Division

"We need immediate response to our critical operational problems. We can't afford delays. We've been mighty impressed with Jim Bell and his team at Dynapro. They respond quickly. And that's what counts to us."

Trevor Tilson, Designer, Eddy Specialty Papers
